

Comparison of SA and FB Strut Cartridges and Hardware

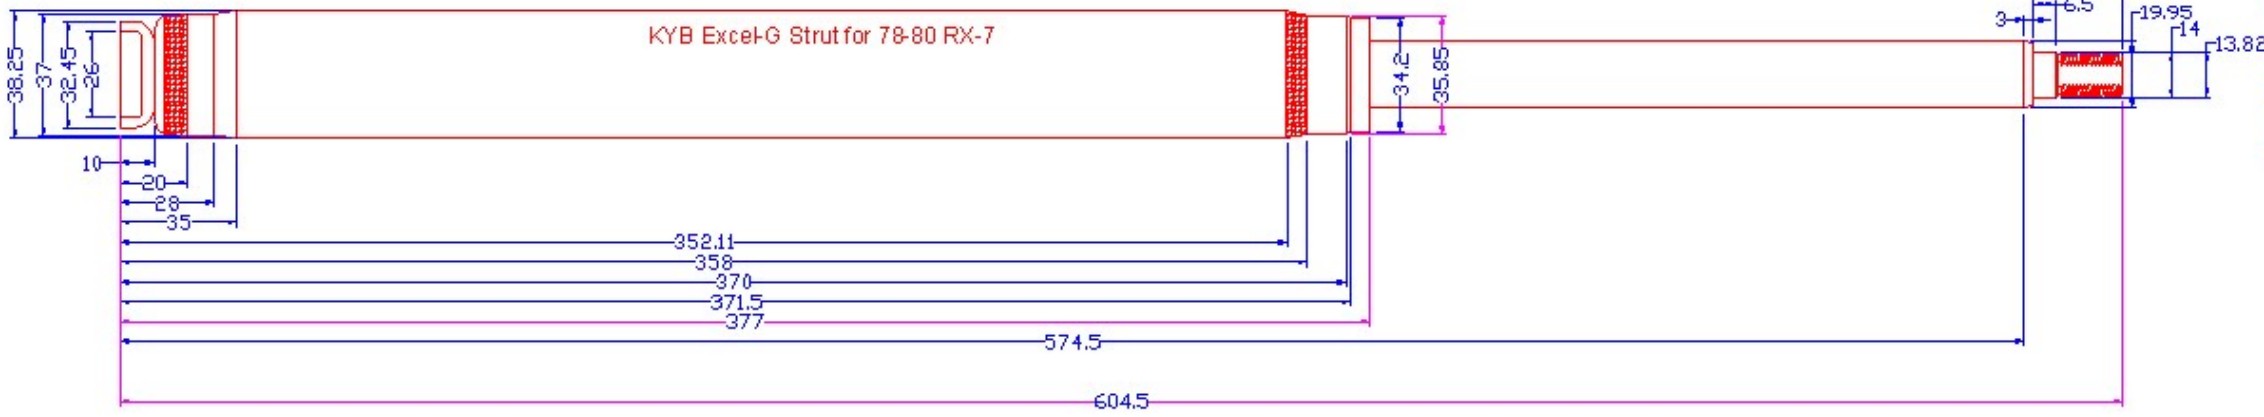

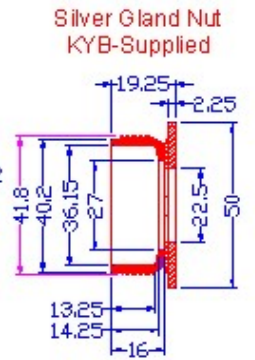

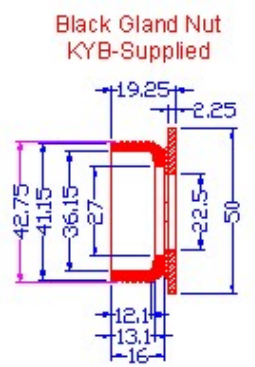

By Glen Powell, "DivinDriver," 9-20-11

Key Differences:

- 1) Main body is 23mm shorter on FB Cart.
- 2) Top shape of main body differs; Gland nut design differs in complement
- 3) SA piston is flat-keyed 2 sides where it enters bearing plate; FB is not
- 4) Shape of piston tip differs markedly; not interchangeable within bearing plates
- 5) Overall dimension 10-5mm longer on SA

Summary:

Looks like an FB cartridge could be fitted into an SA tube with an appropriate (~23mm) spacer at the bottom...
 But you'd need the FB bearing plates as well, due to differences in the piston rod shapes.

Threaded Section
 Double-Flat Keyed
 11.85mm across flats

Threaded Section Full Round;
 Hex Key Indent @ End
