*****Product Information Bulletin*****

Dear Valued Customers,

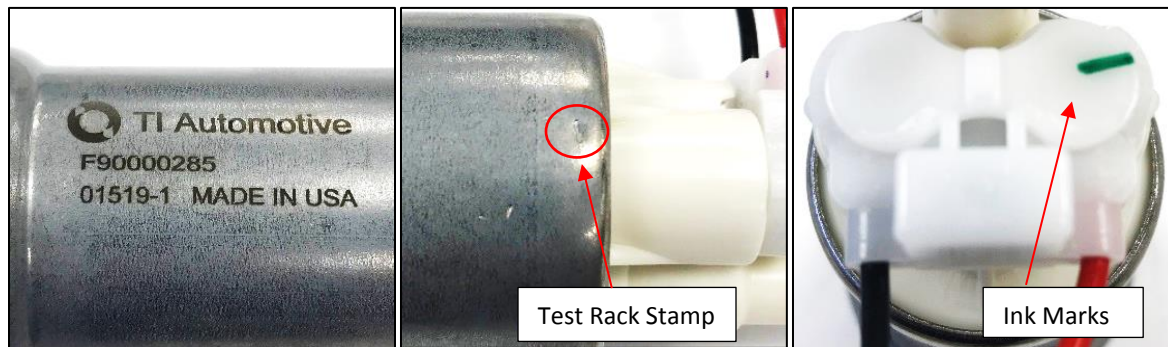

Subject: DCSS 39/50 FFV pump identification

Thank you for your patience while we transfer additional production of TI Automotive's 39/50 DCSS pumps from the Greenville, TN plant to the Caro, MI plant. Part Numbers affected: F90000267, F90000274, and F90000285

There are minor product appearance differences between pumps from the two facilities. Pumps manufactured at the Caro MI facility currently do not contain the QR code and have marks on the outer shell located on the pump outlet side. These marks indicate the pump passed our 100% functional end of line testing. Pumps manufactured in Greenville are labelled with smaller white font and include a QR code.

All production is planned to be located at the Caro MI plant by Q2 2020 with set pump marking / labeling.

******Current Caro Production Identification/Markings******
